Regulatory Statements

FCC Notice

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1.   Reorient or relocate the receiving antenna.

2.   Increase the separation between the equipment and receiver.

3.   Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

4.   Consult the dealer or an experienced radio/television technician for help.

Notice 1:

The changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Notice 2:

Shielded interface cables, if any, must be used in order to comply with the emission limits.

FCC Requirement

This equipment complies with Part 68 of the FCC rules. On the base unit of this equipment is a label that contains, among other information, the FCC Registration Number and Ringer Equivalence Number (REN) for this equipment. If requested, this information must be given to telephone company.

The REN is useful in determining the quantity of devices you may connect to your telephone line and still have all of those devices ring when your telephone number is called. In most, but not all area, the sum of the REN of all devices connected to one line should not exceed five (5). To be certain of the number of devices you may connect to your line, as determined by the REN, you should contact your local telephone company to determine the maximum number of REN for your calling area.

If your equipment causes harm to the telephone network, the telephone company may discontinue your service temporarily. If possible, they will notify you in advance. But if advance notice is not practical, you will be notified as soon as possible. You will be informed of your right to file a complain with the FCC. Your telephone company may make changes in its facilities, equipments, operations or procedures that could affect the proper functioning of your equipment. If they do, you will be notified in advance to give you an opportunity to maintain uninterrupted telephone service.

The equipment may not be used on coin service by the telephone company. Connection to party lines is subject to state tariffs.

IMPORTANT SAFETY INSTRUCTIONS

1. Read these instructions carefully.

2. Follow all warnings and instructions marked on the product.

3. Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.

4. Do not use this product near water.

5. Do not place this product on an unstable cart, stand, or table. The product may fall, causing serious damage to the product.

6. The openings should never be blocked by placing the product on a bed, sofa, rug, or other similar surface. This product should never be placed near or over a radiator or heat register, or in a built-in installation unless proper ventilation provided.

7. This product should be operated from the type of power indicated on the marking label. If you are not sure of the type of power available, consult your dealer or local power company.

8. Do not allow anything to rest on the power cord. Do not locate this product where persons will walk on the cord.

9. If an extension cord is used with this product, make sure that the total ampere rating of the equipment plugged into the extension cord does not exceed the extension cord ampere rating. Also, make sure that the total rating of all products plugged into the wall outlet dose not exceed 15 amperes.

10. Do not attempt to service this product yourself, as opening or removing covers may expose you to dangerous voltage points or other risks. Refer all servicing to qualified service personnel.

About this Manual

Purpose

This user   guide gives you all the information you need to install and operate the modem properly.

Manual Structure

This user guide consists of five chapters and one appendix:

Chapter 1   Getting Started

This chapter tells you what items are contained in the package and things that you need to check before you proceed with the installation of the modem.

Chapter 2   Modem Overview

This chapter gives you all the necessary information that you need to know about the modem, such as its features and layout.

Chapter 3   Installing the Modem

This chapter contains step-by-step procedure on how to install the modem and other necessary peripherals, configure the modem under Windows operating system, and verify the modem installation.

Chapter 4   Communication Software

This chapter gives tips on how to configure your modem Communication software.

Chapter 5   AT Commands

This chapter guides you on how to use the AT commands that will allow you to directly control fax/modem activities.

Appendix A   Troubleshooting

This appendix gives tips on how to resolve the common problems that you might encounter when using the modem.

Conventions

The following conventions are used in this manual:

`Text entered by user`	Represents text input by the user.
`ALT`, `ENTER`, `F9`, etc.	Represent the actual keys that you have to press on the keyboard.

NOTE
Gives bits and pieces of additional information related to the current topic.

WARNING
Alerts you to any damage that might result from doing or not doing specific actions.

CAUTION
Suggests precautionary measures to avoid potential hardware or software problems.

IMPORTANT
Reminds you to take specific action relevant to the accomplishment of the task at hand.

TIP
Tells how to accomplish a task with minimum steps through little shortcuts.

Table of Contents

Appendix A   Troubleshooting

List of Figures

List of Tables

Getting Started

Congratulations on your purchase of this Data/Fax/Voice modem . This modem features the latest innovation in high-speed modem design, making electronic communication faster and easier. It incorporates the full-duplex speakerphone technology that allows true simultaneous two-way conversation; thus, hand-free conversation and telephone conferences are made possible.

This manual guides you on how to install and properly use the modem in order to take full advantage of its features.   An appendix about troubleshooting is also included to help you fix minor problems that you might encounter while using the modem.

1.1   Package Contents

Make sure that you have the following items:

* External Modem

* RJ11 telephone cable

* RS232 serial cable

* AC power adapter

* Quick Start Guide

* CD-Title with Application Software and manual

If any of the items is damaged or missing, contact your dealer immediately.

1.2　System Requirements

Before you proceed, make sure that your system meets the following requirements:

- Penitum Based (above) IBM-compatible PC system with an empty PCI slot

- At least 16 MB memory

- Windows 9X/Windows ME/Windows NT 4.0/ Windows 2000 operation system
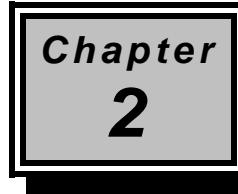

Modem Overview

Before you proceed with the installation, it is necessary that you have enough information about the modem.

This chapter tells you all you need to know about the modem.

2.1   Specifications

Data Modem Operation

- Line Speed: 300 ~ 56000bps

- Standard Compatibility: V.90/K56Flex, ITU V.34, V.32,V.32bis, V.23, V.22bis, V.21, and Bell 103, 212A

- Error Correction: ITU-T V.42, MNP2-4

- Data Compression: ITU-T V.42bis, MNP5

- Flow Control: RTS/CTS, XON/XOFF

- Comment Set:: TIA/EIA 602 "AT" command set

Fax Modem

- Line Speed: 2400 ~ 14400bps

- Standard Compatibility: ITU-T V.17, V.27 ter,V.29

- Command Set: EIA-578 Service Class 1

Voice Operation

- Digital Telephone answering machine (TAM); Voice mail system

- Voice Sampling Rate: 8-bit monophonic audio data encoding at 11.025KHz or 7200Hz

- FDSP: Full-duplex speakerphone with acoustic and line echo cancellation

General Features

- Line Interface: 2xRJ-11 jacks for line and telephone

- DTE Interface: RS232C serial interface

- Voice Interface: 2x audio jack for microphone input and speaker output

- Ambient Temperature:
  - Operating: +10° ~ +50°C
  - Non-operating: -20° ~ +60°C

- Humidity:
  - Operating: 20% ~ 80% RH
  - Non-operating: 20% ~ 80% RH

- Dimensions: 135mm (L) x 95mm (W) x 25mm (H)

2.2 Front Panel

The LED indicators located on the front panel report modem status and activity. The table below shows the function of each LED indicator:

Table 2-1 LEDs

Label	Name	Description
OH	Off Hook	Lights when modem is off hook
CTS	Clear to Send	Lights when CTS signal is active
RTS	Ready to Send	Lights when RTS signal is active
RD	Receive Data	Flashes when modem is receiving data from a remote modem
SD	Send Data	Flashes when modem is transmitting data to a remote modem
CD	Carrier Detect	Lights when modem receives a valid data signal (carrier) from a remote modem
TR	Terminal Ready	Lights when DTR signal is active
MR	Modem Ready	Lights when power on
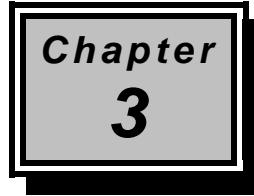

Installing the Modem

This chapter contains detailed instructions on how to install and configure the modem, as well as how to verify if your installation is correct. We recommend that you follow the steps accordingly to avoid future problems.

3.1 ESD Precautions

Electrostatic discharge (ESD) can damage your processor, disk drives, expansion boards, and other system components. Always observe the following precautions before you install any system component.

1. Do not remove a component from its protective packaging until you are ready to install it.

2. Wear a wrist grounding strap and attach it to a metal part of the system unit before handling components. If a wrist strap is not available, maintain contact with the system unit throughout any procedure requiring ESD protection.

3.2 Setting up the Modem

This external modem is easy to install. Just follow the instructions below.

To install the modem:

1. Make sure that your system is turned off before you install the modem.

2. Plug the male (9-pin) serial cable into the *RS-232C* connector at the back of the modem. See chapter 2 for the location of the connectors.

3. Plug the other end of the serial cable into your system's serial port (COM1 or COM2 on your system).

4. Plug the telephone cable into the *LINE* jack located at the back of the modem. See chapter 2 for the location of the jack.

5. Plug the other end of the telephone cable into a telephone wall jack.

6. Plug the AC adapter power cord into the *AC 9V* connector located at the back of the modem. See chapter 2 for the location of the connector.

7. Plug the transformer end of the adapter into a standard AC wall outlet.

8. To connect a telephone to the modem:

   a. Plug the telephone to the modem *PHONE* jack.

   b. Lift the handset and listen for a dial tone to check for a working connection.

9. To connect a speaker and a mic to the modem:

   a. Plug the speaker in to the modem *SPK* connector.

   b. Plug the mic in to the modem *MIC* connector.

10. Turn your modem on. The modem should perform a self-test and then be ready for use. After every thing checks out, turn your computer on.

NOTE: Make sure that your modem is turned *off* before you plug in the AC adapter. Also check the voltage range in your area before plugging your system into an outlet.
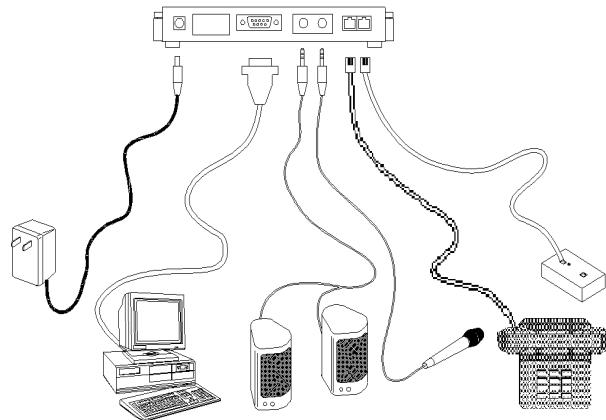

Fig 3-1 Connecting Peripherals

3.3   Setting Up your Modem for Windows 95

3.3.1   Installing Modem Drivers with Windows 95 Version 950 and 950a

Windows 95 will automatically detect your new hardware when you first install it. To install the driver for your modem, follow the procedures as below:

1. Turn on your computer. As the Windows 95 operating system boots up, it displays a New Hardware Found dialog box on your screen for a few seconds with the identifier name (Premier V.90 56K xxxx series) of your modem.

2. In the New Hardware Found dialog box, you have three choices to install a driver. The default choice is for the driver to be installed from a disk provided by the hardware manufacturer. Highlight this selection if it is not already highlighted and click **OK**.

3. Make D:\ the default drive for the source location.

4. Insert the drive CD into to the CD-ROM and click **OK**.

5. Windows 95 will auto-detect the correct files and copy them onto your hard disk.

3.3.2 Installing Modem Drivers with Windows 95 Version 950b

1. Turn on your computer. As the Windows 95 operating system boots up, it displays a Updated Device Driver Wizard dialog box shown on your screen.

2. Insert the driver CD into the CD-ROM drive and click **NEXT**.

3. After Windows 95 finishes searching for updated drivers, click **Finish**.

4. Windows 95 will copy the files onto your hard disk.

5. After Windows 95 finishes copying files, it will detect another device call Voice Modem Serial Wave Device. Simply follow the same instructions as above for the Wave Device installation.

3.4 Setting Up Your Modem for Windows 98

1. Turn on your computer. As the Windows 98 operating system boots up, it displays a Add New Hardware Wizard dialog box shown on your screen for a few seconds with the identifier name (Conexant SmartSCM External PnP Modem) of your modem.

2. Click **NEXT**, then a new dialog box will show on the screen.

3. In the new dialog box, you have two choices to install a driver. The default choice is search for the best driver for your device. Highlight this selection if it is not already highlighted and click **NEXT**.

4. A new Add New Hardware Wizard dialog box will display on the screen.

5. Insert the driver CD into the CD-ROM drive and highlight the Specify a location selection and click browse button to find out the "D:\driver\Win9x " .Then click **NEXT**.

6. Windows 98 will copy the files onto your hard disk**.**

7. After Windows 98 finishes copying files, it will detect another device call Wave Device for Voice Modem. Simply follow the same instructions as above for Wave Device installation.

3.5 Setting Up Your Modem for Windows ME

Turn on your computer. As the Windows ME operating system boots up, it displays a Add New Hardware Wizard dialog box shown on your screen for a few seconds with the identifier name (Conexant SmartSCM External PnP Modem) of your modem.

1. Click **NEXT**, then a new dialog box will show on the screen

Add New Hardware Wizard

Windows will search for new drivers in its driver database on your hard drive, and in any of the following selected

○ Search for the best driver for your device. (Recommended).

☐ Removable Media (Floppy, CD-ROM...)

☑ Specify a location:

D:\driver\WinME

Browse

○ Display a list of all the drivers in a specific location, so you can select the driver you want.

< Back   Next >   Cancel

2. Insert the driver CD into the CD-ROM drive and click browse button to find out the "D:\driver\WinME " .Then click **NEXT**.

3. Windows ME will copy the files onto your hard disk**.**

4. After Windows ME finishes copying files, it will detect another device call Wave Device for Voice Modem. Simply follow the same instructions as above for Wave Device installation.

3.6 Setting Up Your Modem for Windows 2000

1. Turn on your computer. As the Windows 2000 operating system boots up, it displays a Found New Hardware Wizard dialog box shown on your screen.

2. Click **NEXT**, then a new dialog box will show on the screen.

3. In the new dialog box, you have two choices to install a driver. The default choice is search for the best driver for your device. Highlight this selection if it is not already highlighted and click **NEXT**.
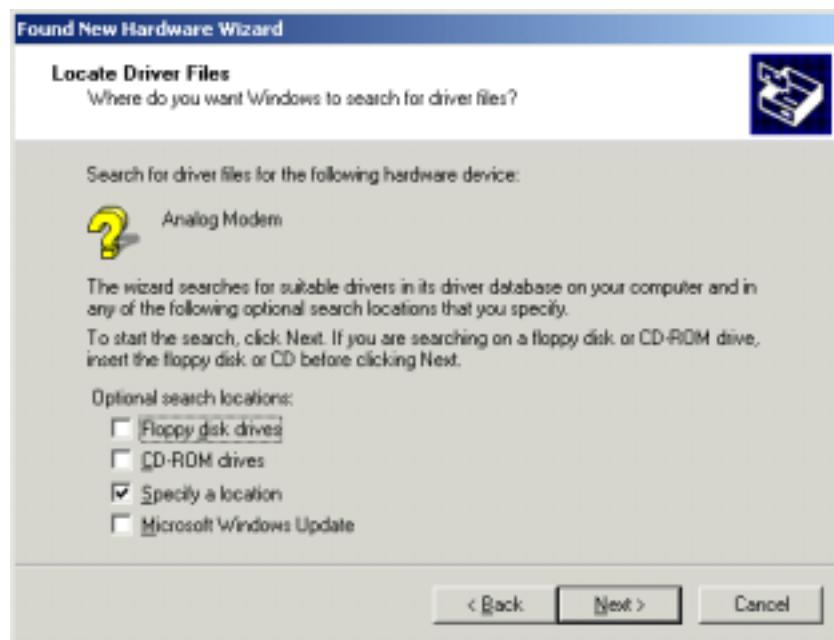

4. A new Found New Hardware Wizard dialog box will display on the screen.

5. Insert the driver CD into the CD-ROM drives and highlight the "specify a location" and click **NEXT** .

6. Windows 2000 will copy the files onto your hard disk**.**

5. After Windows 2000 finishes copying files, it will show " Windows has finished installing the software for this device". Then click **FINISH.**

3.7 Setting Up Your Modem for Windows NT4.0

1. After Windows NT boot, double click on the **Modems** icon.

2. At the Install New Modem screen, check the box in front of "**Don't Detect my Modem, I will select it from a List**".

3. Select **Next**, then Have Disk. Insert the driver CD into the CD-ROM drive.

4. Type D:\driver\WinNT4.0, then click **OK**..

5. Highlight and select the modem which corresponds to the one you purchased, then click **NEXT**.

6. Select the COM port to which the modem was attached. Then select **NEXT**, then **Finish**.

7. Windows NT will copy the files onto the hard disk.

3.8 Testing Your Modem Installation

To test if you have installed the modem properly:

1. Perform the software function that puts your system in Terminal mode.

   For Windows 95/98/2000: Use the Hyper Terminal program.

   In Terminal mode, a cursor appears on the screen, allowing you to send commands directly to the modem.

2. To check if your system and modem are functioning properly, type:

   AT&F<Enter>

The modem should respond OK, if any of the following screen problems occur, refer to Appendix A for troubleshooting tips.

- The characters you type do not appear

- No OK message appear

- Double characters appear

After you have successfully installed the modem, your next step is to configure the Communication software. For details, see Chapter 4.

Communication Software

This chapter gives you tips on how to configure your communication software.

4.1 Installing the Communication Software

The Modem package comes with a Communication software disk and manual. To install the Communication software,simply insert the communications software CD into the CD-ROM drive,under Win9X/ME/NT/2000, the auto-run function will start the shell program, just follow the instruction on the screen for software installation.

If you want to use other communication program, please refer to section 4.2.

4.2 Tips on Configuring the Communication Software

This modem uses the most up-to-date industry and commercially popular standards to ensure functional compatibility with most communication software. During initial setup of the communication software, it will normally prompt you to define the type of fax/modem that you are currently using. The following list guides you on how to select the proper device type.

> *The device type only defines the protocol by which your software will communicate with your fax/modem and does not set nor limit the speed.*

1. For the Baud rate, choose any speed between 38,400 to 115,200. Your fax/modem will automatically adjust to the optimum transmission speed after successfully connecting with a remote fax/modem.

2. Many communication software use the modem response to control program flow. Make sure that the software is set to recognize a CONNECT 28800 response. If this does not work, set the program to simply recognize just the CONNECT response without any baud rate information.

3. There are three flow controls: none, hardware (CTS/RTS), and software (XON/XOFF). Set your software to use either hardware or software flow control. If set to none, the communication software will not be able to detect a buffer overflow and result in transmission errors.

4. For fax device type, choose `TR29 Class 1`.

5. For fax speed, choose `automatic` or `fastest speed`. Your fax/modem will automatically adjust to the optimum transmission speed after successfully connecting with a remote fax machine or another fax./modem.

6. Make sure that you have correctly set all the other parameters required by the software to operate successfully.

7. Refer to your Communication software manual for details.

You are now ready to do fax/modem communication. See Chapter 5 for details.

AT Commands

The AT commands are used to directly handle fax/modem data activities, such as dialing or answering a data call or sending a fax. To send commands to your modem, you must access the modem in a terminal mode which is provided by most communication software. Also, you need to know the format for typing the fax/modem commands and responses.

This chapter tells you how to properly use the AT commands.

> *If you will be using a communication software program to do fax/modem communication, you will probably not need to type the commands because the software program will handle these tasks for you. Similarly, you will not see the response because your software program may intercept them.*

5.1   Entering a Command

To enter a command:

1.   Type AT. This is the Attention Code informing the modem that a command follows. The Attention Code may be in upper or lower case.

2.   Type the command. Refer to the succeeding sections.

3.   Press ENTER to send the command to the modem (except for A/ and +++ commands).

For example:

```
ATccpp   ENTER
```

where: AT: Attention Code
         cc: any command
         pp: any parameter that is required by the command

The following sections tell how to enter basic commands. The other commands are described in the AT_CMD.TXT file contained in the fax/modem driver diskette. You may use DOS EDIT or any suitable editor to view this file.

5.2   Repeating a Command (A/)

The A/ command tells the modem to repeat the last command you entered.

When entering this command, DO NOT type the AT before this command and DO NOT press ENTER *after entering the command.*

5.3   Dialing (D)

The D command dials the phone number. For example, to dial the number 02-1234-5678, type:

```
ATD12345678
```

Then press ENTER. All three entries are treated the same.

You may use numbers 0~9 in all dial strings. You may also use spaces, hyphens, parentheses, or any other punctuation except the dial modifiers to make the command line easier to read.

5.4   Tone or Pulse Dialing (T or P)

To tone or pulse dial a number sequence, insert a T or P between the dial command (D) and the phone number. The modem prepares for tone dialing.

If you have used P in the last dial string, you only need to enter a T in the dial string.

For example:

```
ATDT(or P)12345678
```

5.5   Pause (,)

Inserting a Pause command in the dial string inserts either a 2-second pause or the value in status register S8 in the dialing sequence.

For example:

```
ATDP,12345678
```

5.6   Wait for Second Dial Tone (W)

The W command makes the modem pause and listen for a second dial tone before continuing the dial command.

For example:

```
ATDW0212345678
```

You can use the pause and wait for second dial tone commands when using long distance services.

5.7   Call Transfer or Other On Hook Feature (!)

Enter an exclamation mark (!) to transfer a call or do something similar that requires on-hook or ″flash-hook″.

For example:

```
ATDT9,323-8000!,#7377
```

5.8   Wait for Silence (@)

The Wait for Silence command is used for special service like automatic paging. The @ modifier tells the modem to wait for one or more rings then listen for 5 seconds for continuous silence before dialing. If 5 seconds of silence is not detected within the time set in register S7, the modem hangs up.

5.9　Storing Telephone Numbers (&Zn=t)

The modem can store up to four sets of telephone numbers; each set dial string can contain up to 34 digits. To store telephone numbers including all the dial modifiers that you may need, enter:

    AT&Zn=t

where: n = locations 0~3
        t = 0~9, *, # and any of the dial modifiers T, P, W, @, ;, !.

For example, to store the dial sequence T9,1551212 at location 2, type:

    AT&Z2=T9,1551212

5.10　Dialing Stored Numbers (S=n)

Enter ATDS=n to dial the phone number stored at location n (where n=0~3).

5.11　Answering a Call

5.11.1　Manual Answering (A)

The factory presets the modem to answer a call only when you enter ATA. This is useful especially if you are using only one telephone line for your modem and telephone.

5.11.2   Auto-answering (S0=n)

The modem   default setting is not to answer a call unless you manually enter the ATA command. However, if you have a separate telephone line for the modem and your telephone, you can set the modem to automatically enter incoming calls.

You can specify the number of rings before the modem answers the call. To specify, type:

    ATS0=n

where: `n` is the number of rings after which, the modem answers the call. The settings are from `1~255`. Set `S0=0` to disable auto-answer (default setting).

5.12   Hanging Up or Going Off Hook (H)

Enter:

    ATH   to let the modem hang up.

    ATH1   to let the modem go off-hook

5.13   Selecting Response Message (Vn)

The V commands tell the modem to show response messages as words or numbers. See Table 5-7 for the list of response messages in both numbers and words.

Enter:

    V0   Enables number response message.

    V1   Enables word response message.

5.14 Enabling/Disabling the Speaker (Mn)

This command lets you enable or disable the speaker.

Enter:

    M0   Speaker always off
    M1   Speaker on until carrier present (default)
    M2   Speaker always on
    M3   Speaker off during dialing ; speaker on until carrier
               Present

5.15   Adjusting the Speaker Volume (Ln)

This command sets the audio output of the speaker.

Enter:

L0	Low speaker volume
L1	Low speaker volume (default)
L2	Media speaker volume
L3	High speaker volume

5.16   Reading an S-Register Value(Sn)

To read the current value of an S-Register, type:

ATSn?   ENTER

where n is an S-Register number. The modem responds with decimal value of the S-Register, in three-digit format followed by OK.

To read values from more than one S-Register, type:

ATSn?Sn?   ENTER

where n specify the different S-Register numbers.

5.17   Changing an S-Register Value (Sn=x)

To change an S-Register value, type:

ATSn=x   ENTER

where: n: S-Register number
        x: value you want to assign to the specified S-Register

5.18   Sending Faxes

You can send a fax using the fax software. The commands are automatically issued by the fax software. In case you encounter some problems while sending or receiving a fax, refer to your fax software manual.

> *Some fax packages require software flow control. The modem uses the hardware flow control as the factory default. You may need to enable the software flow control to send and receive faxes.*

5.19   Checking Data or Fax Status (+FCLASS=?)

This command identifies if the modem is set for data or fax operation. The possible values are 0 for data mode and 1 for fax class 1.

5.20   Quick Reference

5.20.1   Data Modem Commands

Table 5-1   Basic AT Commands

Command	Description	Function
A/	Re-execute Command	None
A	Answer	None
Bn	ITU-T or Bell	0 = Selects ITU-T V.22 at 1200 bps and ITU-T, V.21 at 300 bps
		1 = Selects Bell 212A at 1200 bps and Bell 103J, at 300 bps (default)
		2 = Selects ITU-T V.23 only.

Command	Description	Function
		The originating modem , transmits at 75 bps ; the answering mode, transmits at 1200 bps.
		3 = Selects ITU-T V.23 only. The originating modem, transmits at 1200 bps ; the answering modem transmits at 75 bps.
Cn	Carrier Control	0 = Transmit carrier always off (default)
		1 = Normal transmit carrier
Dn	Dial	N can equal a character string using any of the following:
		• 0,1,2,3,4,5,6,7,8,9 (Dialing Digit)
		• *,#,A,B,C or D (Tone Dial Characters)
		• L Redial last number: the modem responds with Error if ATDL is issued. If L is embedded in the dial string, it is considered as a presentation character and hence ignored.
		• P (Pulse Dial)
		• T (Tone Dial)
		• R (Reverse originate mode)
		• S=n(Dial NVRAM telephone number)
		• ! (Flash Hook)
		• W (Wait for dial tone)
		• @ (Wait for silence)
		• , (Pause)
		• ; (Return to command state)

Command	Description	Function
		● -() (Ignored by modem)
En	Command echo	0 = Disable echo
		1 = Enable echo (default)
Fn	Online echo	0 = Enable online echo
		1 = Disable online echo (default)
Hn	Switch hook control	0 = Hangs up the telephone line (default)
		1 = Picks up the telephone line
In	Identification	0 = Reports product code
		1 = Least significant byte
		2 = Reports "OK".
		3 = Identification codes
		4 = Reports OEM defined identifier string
		5 = Country code
		6 = Data pump model
Ln	Speaker Volume	0 = Low speaker volume
		1 = Low speaker volume (default)
		2 = Medium speaker volume
		3 = High speaker volume
Mn	Speaker Control	0 = Speaker always off
		1 = Speaker on until carrier present (default)
		2 = Speaker always on
		3 = Speaker off during dialing; speaker on until carrier present

Command	Description	Function
Nn	Select data rate handshake	0 = Handshake only at DTE-to-modem data rate
		1 = Begins handshake at DTE-to-modem data
		rate and falls to highest compatible rate (default)
On	Return to online Data Mode	0 = Returns to online without retrain (default)
		1 = Returns to online with retrain
P	Set Pulse Dial	None
Qn	Result code display control	0 = Enables result codes (default)
		1 = Disables result codes
Sn	Read/write S-Register n	=x Write value x to S –register n
		? Read S-register n
T	Set Tone Dial	Default tone dial
Vn	Result Code Form	0 = Choose numeric form
		1 = Choose verbose (text) form (default)
Wn	Connect Message Control	0 = Reports DTE speed response codes (default).
		2 = Reports DCE speed response codes
		3 = Reports DTE speed response codes and inform- ation on error correction and data compression
		4 = Reports protocol, data compression, and DTE data rate

Command	Description	Function	
Xn	Result Codes type	0	= Blind dial, no busy detect, CONNECT
		1	= Blind dial, no busy detect, CONNECT XXXX
		2	= Dial tone detect, no busy detect, CONNECT XXXX
		3	= Blind dial, busy detect, CONNECT XXXX
		4	= Full monitor, all messages, CONNECT XXXX(default)
Zn	Soft Reset and Restore Profile	0	= Soft reset and restore profile0 (default)
		1	= Soft reset and restore profile1

Table 5-2. AT & Commands

Command	Description	Function
&Cn	DCD option	0 = DCD always on
		1 = DCD normal (default)
&Dn	DTR option	0 = In Async mode, modem ignores DTR
		1 = Modem switches from data mode to command mode when an on-to-off transition of DTR occurs
		2 = When DTR switches off, the modem goes onhook and disables Auto-answer mode; when DTR switches on, auto-answer is enabled (Default)
		3 = Turning off DTR re-initializes the modem and resets values except UART registers

Command	Description	Function
&Fn	Restore Factory Configuration	None
&Gn	Select Guard Tone	0 = Disable (default) 1 = 550 Hz 2 = 1800 Hz
&Kn	Flow Control	0 = Disable 3 = Enable RTS/CTS flow control (default) 4 = Enable XON/XOFF flow control
&Pn	Dial pulse ratio	0 = Sets 10-pps pulse dial with 39%/61% make/break 1 = Sets 10-pps pulse dial with 33%/67% make/break
&Sn	DSR Override	0 = DSR always on (default) 1 = DSR active only during handshaking and when carrier is lost
&Tn	Self Test commands	0 = Terminates test in progress (default) 1 = Initiates local analog loopback
&Vn	View active and stored profiles	0 = View active profile and stored profile 0 1 = View active profile and stored profile 1
&Wn	Store Current Configuration	0 = Store current configuration as profile 0 1 = Store current configuration as profile 1
&Yn	Designate a Default Reset Profile	0 = Use profile 0 on power up (default) 1 = Use profile 1 on power up
&Zn=X	Store Telephone Number (0-3) (up to 30 digits)	0 to 3 Specified telephone number ID x up to 30 digits for the telephone

Command	Description	Function
		number to be saved

Table 5-3. AT % Commands

Command	Description	Function
%Cn	MNP 5 data compression control	0 = No compression
		1 = Enables MNP5 data compression (default)
%En	Auto-retrain control	2 = Disables auto-retrain
		3 = Enables auto-retrain (default)

Table 5-4. AT \ Commands

Command	Description	Function
\Nn	Operating Mode	0 = Selects Buffer (Normal) mode with speed buffering
		1 = Selects Buffer (Normal) mode with speed buffering
		2 = Selects MNP Reliable mode
		3 = Selects V.42 Auto-reliable mode (default)
		4 = Selects V.42 Reliable mode

Table 5-5. AT + Commands

Command	Description	Function	
+MS <carrier>, <automode>, <min_rate>, <max_rate>	Select Modulation	<carrier>	Description
		V21	V.21 300 bps
		V22	V.22 1200 bps
		V22B	V.22 bis 1200 and 2400 bps
		V23C	V.23, with constant carrier;
			1200bps forward and 75bps
			reverse
		V32	V.32 4800 and 9600 bps
		V32B	V.32 bis 7200, 9600, 12,000, and 14,400 bps
		V34	V.34 asymmetrical
			connections:
			2400, 4800, 7200, 9600,
			12,000, 14,400, 16,800,
			19,200, 21,600, 24,000,
			26,400, and 28,800 bps
		V.90	56-kbps V.90 asymmetrical
			Connections (transmit):
			4800, 7200, 9600, 12,000,
			14,400, 16,800, 19,200,
			21,600, 24,000

5.20.2   Fax Modem Commands

Table 5-7. Fax Commands

Command	Description	Function
+FCLASS=n	Mode selection	0 = Data mode (default) 1 = Class 1 fax mode 8 = Voice mode enabled
+FRH=n	Receive HDLC data	3
+FRS=n	Wait for silence	1-255 (x10ms)
+FTM=n	Transmit Data	24 =V.27ter 2400 bps 48 =V.27ter 4800 bps 72 =V.29 7200 bps 73 =V.17 7200 bps long 74 =V.17 7200 bps short 96 =V.29 9600 bps 97 =V.17 9600 bps long 98 =V.17 9600 bps short 121 =V.17 12000 bps long 122 =V.17 12000 bps short

Command	Description	Function
		145 =V.17 14400 bps long
		146 =V.17 14400 bps short
+FRM=n	Receive Data	24 =V.27ter 2400 bps
		48 =V.27ter 4800 bps
		72 =V.29 7200 bps
		73 =V.17 7200 bps long
		74 =V.17 7200 bps short
		96 =V.29 9600 bps
		97 =V.17 9600 bps long
		98 =V.17 9600 bps short
		121 =V.17 12000 bps long
		122 =V.17 12000 bps short
		145 =V.17 14400 bps long
		146 =V.17 14400 bps short
+FTH=n	Transmit Data with HDLC Framing	3 =V.21 300 bps
+FRH=n	Receive Data with HDLC Framing	3 =V.21 300 bps

5.20.3 Voice Modem Commands

Table 5-8. Voice Commands

Command	Description	Function
+FCLASS =n	Mode selection	0 = Data mode (default)
		1 = Class 1 fax mode
		8 = Voice mode enabled
+FLO=n	Flow Control	0 = Disable XON/XOFF and

Command	Description	Function		
	Select	CTS/RTS flow control		
		1 = Enable XON/XOFF flow control in either direction (default)		
		2 = The DTE uses ITU-T's RTS to control flow to the modem ; the modem uses ITU-T CTS to control flow to the DTE		
+VCID=n	Caller ID Selection	0 = Disables Caller ID (default)		
		1 = Enables Caller ID with formatted presentation to the DTE.		
		2 = Enables Caller ID with unformatted presentation to the DTE.		
+VDR= <enable>, <report>	Distinctive Ring Selection	<enable>	<report>	Function
		0	---	Distinctive ring disable
		1	0	The modem reports DROF and DRON Messages but does not report RING messages
		1	none,0	The modem reports DROF,DRON and RING messages
		2-255	---	Reserved
+VGM=n	Speakerphone Microphone Gain	n=121-131 n=128 (default)		
+VGR=n	Receive Gain Selection	n=121-131 n=128 (default)		
+VGS=n	Speakerphone Speaker Gain	n=121-131 n=128 (default)		

| Command	Description	Function
+VGT=n	Volume Selection	n=121-131 n=128 (default)
+VIT=n	DTE/DCE Inactivity Timer	n=0-255 (units of 1.0 second) n=0 Disables inactivity timer (default) n≠0 Inactivity timer active
+VNH=n	Automatic Hang-UP Control	0 = The modem retains automatic hang-up as normal in data and fax modes (default) 1 = The modem disable automatic hang-up usually found in non-voice modes 2 = The modem disable all automatic hang-up usually found in non-voice modes except a 'logical' hang-up
+VRA=n	Ringback-Goes-Away Timer	n=0-50 (in 100ms increments) n=0 The DCE returns the 'OK' code immediately after ringback n=50 (default)
+VRN=n	Ringback-Never-Appeared Timer	n=0-255 (in 1-second increments) n=0 The DCE returns the 'OK' code immediately after dialing n=10 (default)
+VRX	Record Mode	This command causes the modem to enter record mode to record voice messages
+VTX	Play Mode	This command causes the modem to start voice transmission (playback mode) and play back a previously recorded voice messages
+VSP=n	Speakerphone On/Off Control	0 = Speakerphone mode disabled (default) 1 = Speakerphone mode enabled

Command	Description	Function
#VSPS=n	Speakerphone Type Selection	0 = Telephone Emulation Mode speakerphone 1 = Digital Speakerphone
+VTD=n	Beep Tone Duration Timer	n=5-255 (units of 10ms) n=100 (default)
+VSD= <silence sensitivity> ,<length of silence>	Silence Detection (Quiet and Silence)	<silence sensitivity> range=121-131 default=128 <length of silence > range=0-255 (units of 0.1 second) value=0 Silence detection disabled default=50 Silence detection enabled

5.20.4 S-Registers

Table 5-9.   S-Registers

Register	Function	Range
S0	Rings to Auto-Answer	0-255 (default = 0)
S1	Ring Counter	0-255 (default = 0)
S2	Escape Character	0-127 (default = 43)
S3	Carriage Return Character	0-127 (default = 13)
S4	Line Feed Character	0-127 (default = 10)
S5	Backspace Character	0-32,127 (default = 8)
S6	Wait before Dialing	2-255 (default = 2) Units: 1second
S7	Wait Time for Carrier	1-255 (default = 60) Units: 1second
S8	Pause time for dial modifier	0-255 (default = 2) Units: 1second
S9	Carrier recovery time	1-255 (default= 6) Units: 0.1second

S10	Carrier Loss Disconnect Time	1-255 (default = 14) Units: 0.1second
S11	DTMF Tone Duration	50-255 (default = 70) Units: 1ms
S12	Guard Time	0-255 (default = 50) Units: 20ms
S14	Bit-mapped Options	Default = 138
S16	Modem Test Options	Default = 0
S18	Modem Test Timer	0-255 (default = 0) Units: 1second
S21	Bit-mapped Options	Default = 48
S22	Bit-mapped Options	Default = 118
S23	Bit-mapped Options	Default = none
S25	Detect DTR Change	0-255 (default = 5) Units: 10ms
S27	Bit-mapped Options	Default = 64
S30	Disconnect Inactivity Timer	0-255 (default = 0) Units: 1minute
S31	Bit-mapped Options	Default = 49
S33	Sleep Mode Timer	0-90 (default = 10) Units: 1second
S37	Maximum Line Speed Attempted	0-35 (default = 0)
S91	Select transmit level	0-15 (default = 10) Units: -dBm
S92	DTMF transmit level	0-15 (default = 10) Units: -dBm

Appendix

A
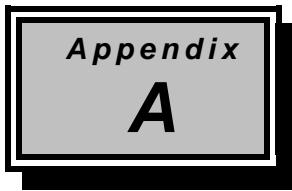

Troubleshooting

This appendix contains information that will help you solve some of the common problems you might encounter while using the modem card. For further assistance, contact your dealer.

Modem does not respond to AT commands

- There may be a COM port/IRQ conflict. Reconfigure the modem COM port address and IRQ line.

- Make sure that you have set the correct COM port and IRQ in the communications software.

- Make sure the system is in Terminal mode of your communications software.

- Reset the modem to its factory defaults by typing AT&F.

Double characters display on your monitor

- Both your modem   and software   local echoes are on. Turn off your modem local echo by typing the ATE0 command.

Modem cannot dial and ″NO DIALTONE" message appears on the monitor

- Check the phone cord connection. Make sure that the jack on the modem labeled Line is connected to an analog phone wall jack.

- The modem cannot recognize the dial tone. This is typical in some corporate PBXs. Use the ATX1 command in your setup string to enable Blind Dial.

Both modems exchange carrier signals but fail to establish a connection

- Place the call again. The telephone company routes every call differently each time you call.

- Try calling a different modem to check if your modem is working.

The modem does not answer an incoming call

- Auto-answer function is disabled. Enable the function through software program or by sending the ATS0=1 command to your modem in terminal mode.

The modem disconnects while online

- This may be caused by line interference. Retry the connection by dialing the numbers several times.

- An incoming call may have broken the connection if the Call-waiting feature is enabled. Disable Call-waiting and try again.

Garbage characters display on the monitor

- Set your modem to the same word length, parity, and stop bits as the remote modem.

- Make sure that your software and modem are set to the same flow control setting.

- The software may not be set for correct terminal emulation. Configure the software to correct type. ANSI terminal emulation is the most commonly used.

- Type the AT&F1 command to load the template that enables hardware flow control as other optimal settings.

Your communication software is reporting many cyclic redundancy check (CRC) errors and low characters per second (CPS)

* You might have experienced noise on the phone line. Place the call again. The phone company routes call differently each time you call.

* Type the AT&F1 command to load the template that enables the hardware flow control as other optimal settings.

* Lower the serial port rate in your communication software to 38,400 bps or 19,200 bps.

* Try a different file transfer protocol (do not use the XMODEM if other protocols are available).

You cannot run the fax and communications software at the same time

* Communication devices can be accessed by only one application at a time.

* In Windows 9X/ME/NT/2000, you can open data and fax communications at the same time, but they cannot use the same modem at the same time.
